

USAS-R System Reports	Classic Comparison	Definition
Configuration	N/A	Configuration details for installed modules.
Custom Field Definitions	N/A	A field you define and place in various interfaces can be used when creating, editing, querying and reporting.
DBA	N/A	Allows a Database Administrator to do direct queries against the database.
Modules	N/A	Displays all available modules within the software version the entity is using.
Monitor	N/A	Administrators have the ability to view various types of events occurring within the system as well as the status.
Remap Budgets	N/A	Program is not fully functional. Once it is, users will have the ability to define what level of reporting they require for their entity's appropriations and then remap the budgets according to those requirements.
Roles	N/A	Roles are defined to represent the basic functions, responsibilities, or tasks of users in the district.
Rules	N/A	Allows for various types of business rules to be written and easily applied to the system. USxS-R comes with sets of required business rules, and optional rules that the district may enable or disable as they desire.
Users	Some USASEC settings	Allows you to create new user accounts or modify existing user accounts.
